Target version:				

Description

In order management, we need to add another platform i.e. Affiliate orders from which we have to fetch orders and update orders. We need to add a new column (order_source) in the orders table to distinguish the orders, its values would be affiliate, web.

Crewlogix has developed the following APIs for this purpose.
we need to call these APIs on the following points:
1. when order status changes from CRM, update status API should be called to update status in the affiliate order system.
2. When an order is edited in CRM, it will reflect in the affiliate system as well. we have the API for this as well
3. when order is split from CRM, it will create new split orders in affiliate orders.

(at time when order status dispatched and system ask for consignment number, that consignment number should also sent to affiliate system)
